VOICE-ACTIVATED  
RADIO INTELLIGENCE

POWERED BY **etFUSION**

## REVOLUTIONIZING COMMUNICATION

"Can you open Gate 3 in the yard?"

"Gate 3 is now open. Over."

**Voice-Activated Radio Intelligence (V-ARI)** is an innovative software and hardware solution that integrates seamlessly with two-way radio networks, leveraging voice artificial intelligence (AI) to enable users to perform tasks, create efficiencies and communicate over push-to-talk (PTT) functionality or data applications.

By combining voice recognition technology with PTT, users can issue spoken commands to transmit messages, request updates, or integrate with applications within the radio system. The system processes these requests in real time, delivering a streamlined and intuitive communication experience.

# HOW IT WORKS

Designed for environments where clear and effective communication is essential, V-ARI enables users to stay engaged in critical tasks while leveraging AI-enhanced voice interaction to streamline and enhance real-time communication over their existing radio system networks.

- ✓ **Real-Time Voice Transcription & Audio Playback:** Transcribe conversations in real-time, creating searchable conversations, keyword detection and assisting dispatchers with reducing the need for voice retransmission of audio.
- ✓ **Push-to-Talk (PTT) Voice Command Integration:** Combines traditional PTT functionality with advanced voice AI, enabling users to issue commands and communicate effectively through their two-way radios.
- ✓ **AI-Driven Voice Recognition:** Processes spoken commands with high accuracy, allowing users to transmit messages, request updates, or activate radio features effortlessly.
- ✓ **Real-Time Data Processing:** Provides instant feedback or system responses based on voice commands, ensuring seamless communication and operational efficiency.
- ✓ **Compatibility with Existing Systems:** Designed to integrate easily with most two-way radio systems, reducing the need for extensive hardware upgrades.
- ✓ **Task Automation:** Enables users to automate routine tasks, such as logging updates, triggering alerts, or inquiring about system statuses, through voice commands.

## V-ARI'S INTEGRATED TECHNOLOGY

## TECHNOLOGY & INNOVATION

V-ARI leverages Motorola Solutions' Smart Mobile Radios as well as Sense & Protect, with our proprietary technology. With this combined technology your critical applications, employees and premises are ensured to be scalable, reliable and safe.
